

TRUST

- How do we demonstrate that AI is safe to use?
- How do we avoid biases?

How to avoid risk:

Making sure decisions by AI make sense to the person and/or organisation.

LIABILITY

- What happens when AI makes an error – or even breaks the law?
- Who is legally responsible?

How to avoid risk:

Making careful changes to laws that address these changes.

CONTROL

- What happens when a machine takes over a process?
- How does a human take it back if they need to?

How to avoid risk:

Thinking carefully about how control is transferred between humans and AI.
